

Abstract of the Disclosure

A Contact Lens Cleaning and Storage Device with left and right side cleaning reservoirs that, independent of each other, receives a quantity of clean solution and contact lenses, having agitating bosses, circular stops and drive system links on one quadrant, a drive system, a motor to operate the drive system, a bottom housing having holders to accommodate the cleaning reservoirs and motor, a top housing having circular cut outs to allow the top portion of the cleaning reservoirs to protrude, an on/off switch, a way to supply power to the motor, and caps for the cleaning reservoirs to prevent the cleaning solution from splashing out. A preferred embodiment includes the cleaning reservoir agitating bosses having the front side curved and the backside flat and a drive system comprising a drive arm and a drive cam.
